

Nano-Risk Governance Portal

Supporting your safe nanomaterials innovation

Welcome to the Nano-Risk Governance Portal from caLIBRAte

The caLIBRAte Nano-Risk Governance Portal will be a state-of-the-art “one stop shop” site to support nano-risk governance.

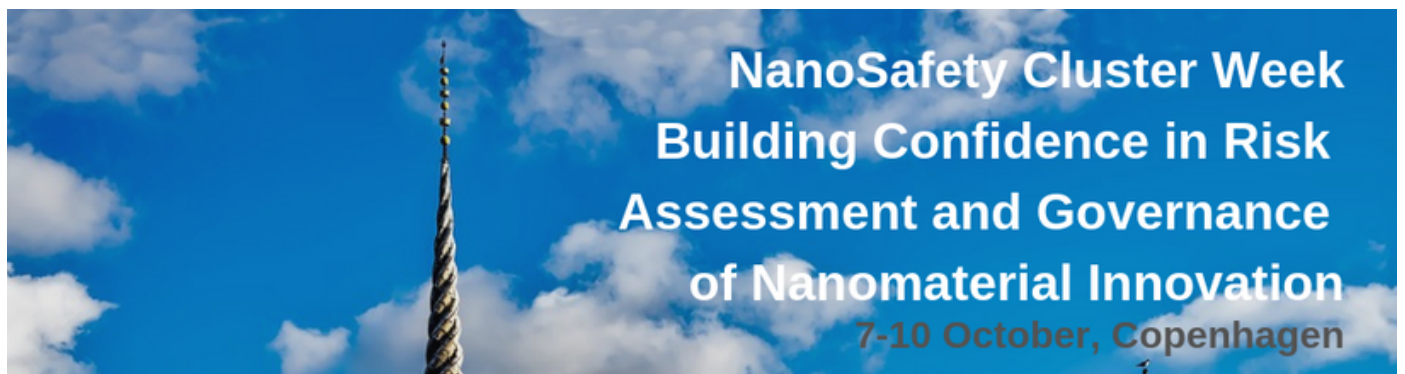

The Portal will provide:

- Qualified (trustworthy) information on nanomaterials and nano-enabled products, their safety and different stakeholders’ risk perception
- Tools for Horizon Scanning, Identification of nanomaterials, Risk Assessment, Risk Management, Decision Support and Workplace Monitoring that have been thoroughly tested and validated by performance testing when possible.
- Access to case studies and qualified material, hazard and exposure measurement data for direct access information and especially to support the nano-risk governance tools.
- Guidance and good practice information relevant for research and development as well as established industrial production of nanomaterials and products containing them.

Portal launch October 2019

The portal will be launched in October 2019 and grow in the long term as a core resource for qualified information and risk governance for nanomaterials.

Find out how the portal works for you

Direct training: October 10, Copenhagen

Online training: From portal launch
